

JAVA + JDBC ASSIGNMENT :

27 March 2025 20:37

Java + JDBC: Hotel Management System with Search Functionality

Java Program Requirements:

1. Connect to Database:

- Create a connection to the MySQL database using JDBC.
- Use appropriate JDBC URL, username, and password.

2. Add a New Room:

- Create a method to add a new room to the hotel database.
- The user should input the room type (e.g., Single, Double, Suite), room status, price per night, and room capacity.

3. View All Rooms:

- Create a method to retrieve and display all the rooms in the hotel from the database.
- Display the rooms in a formatted manner (e.g., tabular format).

4. Update Room Information:

- Create a method to update a room's details (e.g., room price or status).
- The user should input the room's ID, and choose which field (room type, room status, price per night, or capacity) to update.

5. Delete a Room:

- Create a method to delete a room based on its ID.
- The user should input the ID of the room they wish to delete.

6. Search for Room:

- Create a method that allows users to search for rooms by a given field (e.g., room type or status).
- Display the rooms that match the search criteria in a formatted manner.

7. Error Handling:

- Ensure you handle exceptions, especially for database connections and SQL queries.
- Use try-catch blocks and close database resources (Connection, Statement, ResultSet) in the finally block.
