

Creating your first Springboot project

Spring Initializr : is a web-based tool used to bootstrap a Spring Boot project by generating the necessary project structure. It helps you set up a Spring Boot application quickly by filling in details like dependencies, packaging type, and Java version.

1. Project

- Choose build type: Maven or Gradle
- Maven = most common, simple, widely used → recommended for beginners
- Gradle = faster, script based, used in large projects
- Choose Maven for learning & real projects

2. Language

- Choose coding language for Spring Boot
- Options: Java, Kotlin, Groovy
- Java → most popular, recommended for 99% students
- Kotlin → modern dev, sometimes used in microservices + Android
- Groovy → rare now

Creating your first Springboot project

3. Spring Boot Version

- Select Spring Boot framework version
- Always choose latest stable production version
- Do not select snapshot or milestone versions (unstable testing version)

Example shown on site:

- Spring Boot 3.3.5 (latest stable → choose this)

4.PROJECT METADATA:

P

Group

- Unique project identifier, usually organization or your name
- Convention: com.companyname
- Example: com.schoolmanagement

Artifact

- Actual application name and also used for JAR/WAR file name
- Example: student-management
- Final output jar will look like: student-management-0.0.1-SNAPSHOT.jar

Creating your first Springboot project

Name

- Display/project name inside IDE
- Example: StudentManagement

Description

- Small short line describing purpose of app
- Example: This project handles student assignments and records

Package Name

- Base package path where your code (controller, service, repo) will be organized
- Convention: com.companyname.projectname
- Example: com.schoolmanagement.student

Packaging

- Final build format of project
- JAR: Standalone Spring Boot app (recommended)
- WAR: Used for deployment in external servers (old style approach)

Creating your first Springboot project

Java Version

- Java version needed to compile and run the project
- Common versions: Java 11, Java 17 (recommended), Java 21 (latest)
